

Team EVALUATION

2021-CSE-5335-002-Sec2

Please evaluate the presentation/work of the presenting team by using the following criteria.
Your feedback will be considered in assigning the Peer Evaluation, as mentioned in the syllabus

Please try to be as honest and fair as possible in your evaluation.

5 = Excellent/Outstanding work/presentation

4 = Very strong work/presentation

3 = Work/presentation meets minimum standards

2 = Below average Work/ Presentation

0/1 = Poor Work/Presentation**

Evaluation (Name: _____Ram Maruthy Bodepudi_____) UTA ID:
(_____1002057165_____)

Peer Evaluation (Date: __11/26/23_____) (Presenter Name: _____Nimanshu
Bhikadiya_____)

- __5__ Presentation Overall quality
- __5__ Presenter's presentation skills
- __5__ Were you able to understand what was presented?
- __5__ Do you feel the team spent sufficient time on the presentation?
- __5__ How well do you think the project was implemented?
- __5__ How well do you feel the PPT is?

Peer Evaluation (Date: _11/26/23_____) (Presenter Name: _____Bhavani
Bathula_____)

- __5__ Presentation Overall quality
- __5__ Presenter's presentation skills
- __5__ Were you able to understand what was presented?
- __5__ Do you feel the team spent sufficient time on the presentation?
- __5__ How well do you think the project was implemented?
- __5__ How well do you feel the PPT is?

Peer Evaluation (Date: _11/26/23_____) (Presenter Name: ____Harshith Bobde_____)

- ☐_5___ Presentation Overall quality
- ☐_5___ Presenter's presentation skills
- ☐_5___ Were you able to understand what was presented?
- ☐_5___ Do you feel the team spent sufficient time on the presentation?
- ☐_5___ How well do you think the project was implemented?
- ☐_5___ How well do you feel the PPT is?

Peer Evaluation (Date: __11/26/23_____) (Presenter Name: __Sai Chandra Bandi_____)

- ☐_5___ Presentation Overall quality
- ☐_5___ Presenter's presentation skills
- ☐_5___ Were you able to understand what was presented?
- ☐_5___ Do you feel the team spent sufficient time on the presentation?
- ☐_5___ How well do you think the project was implemented?
- ☐_5___ How well do you feel the PPT is?

REFLECTION:

Learning objective based on all of the implementations you have worked on:

While building a chat application utilizing HTML, CSS, React, Laravel, and Node.js, important lessons were discovered. The three main tasks were using CSS to provide a responsive design, enabling version control with Git, and effectively organizing the project structure. It was crucial to incorporate security mechanisms on both the frontend and backend, maintain adequate state, and use React for frontend components. A secure application needed to have strong authentication and authorization protocols, real-time communication with Socket.IO in Node.js, backend development with Laravel, and all of these things. Deployment pipelines for continuous integration were constructed, with an emphasis on error handling, testing, and documentation for maintainability.

Things that went well:

The project's conception and design were well-organized from the outset, which promoted productive development and teamwork. Git's efficient version control

strategy aided in the organization of change tracking. The use of CSS frameworks in responsive design made sure that the user experience was both aesthetically pleasing and intuitive on various devices. Real-time communication was facilitated with Socket.IO in Node.js, and maintainability was enhanced by reusable React components. An application that was secure and reliable was produced by utilizing Laravel for backend development, incorporating security features, and automated testing with Jest. Continuous integration and the deployment pipeline accelerated deployment, while thorough documentation improved code understanding. Engaging in virtual discussion boards yielded beneficial concepts, and an emphasis on user experience and scalability aspects led to a prosperous outcome.

Things that didn't go so well:

Despite the positive qualities, difficulties arose when developing the chat feature. Periodic delays were caused by problems that arose in the balancing of feature complexity and development timelines. It was occasionally challenging to maintain uniform styling across a multitude of components, highlighting the challenges associated with overseeing a unified design. The integration and upkeep of real-time communication with Socket.IO presented technical difficulties that required a great deal of troubleshooting. The dynamic nature of real-time interactions made it challenging to provide complete test coverage even while automated testing was being created. Moreover, it took a lot of work to ensure browser compatibility and resolve cross-browser issues. The deployment pipeline was occasionally disrupted by the failure of continuous integration techniques. These problems brought to light the iterative process of software development and the value of flexibility in handling unanticipated circumstances.

Given the option, what would you have done in a different manner:

Our task for generative AI was to make our HTML design better. Therefore, we decided to use GitHub Copilot as an AI tool to enhance the HTML portion of the website. We created a navigation bar, footer, and other features using this generative AI tool, which also provided us with really well-structured and excellent code suggestions for designing. Additionally, we included a graph to the student portal's student progress monitoring system. This graph is automatically created based on the exam results of the individual students. Similarly, we approached the admin portal in the same manner. The pie chart is visible to the admin in analytics mode and is automatically generated based on the number of users in various roles.
